

Scope & Context Workspace

Scope Page Snapshot

This view combines the scope document, page status, and the guided assistant workspace.

Main Parts Explained

1 Navigation Rail

- Shows the ISO 27001 lifecycle with the current step highlighted.
- Keeps the user oriented between audit activities.

2 Document Header

- Identifies the active scope statement, year, version, and completion badge.
- Makes document status visible before editing or submission.

3 Scope Panel

- Contains the scope narrative, boundaries, exclusions, and dependencies.
- This is the main reference content for the audit workflow.

4 Assistant Panel

- Lists available commands and supports guided document actions in command mode.
- Helps users fill, load, submit, or reset the scope content.

This page anchors the audit by defining the scope statement and the boundaries of review. It gives both the human auditor and the assistant a shared source of truth for the engagement.
